DETAILED ACTION

1. Applicant's amendment and accompanying remarks filed May 8, 2006 have been acknowledged.
2. Examiner acknowledges amended claims 1-2 and 9-21.
3. The objection to the specification is withdrawn due to applicant's submission of a new abstract
4. The rejection of claim 1 under 35 U.S.C. 112, second paragraph is withdrawn due to applicant's argument.
5. The rejection of claims 1-20 under 35 U.S.C. 102(e) as being anticipated by Ellens et al., U.S. Patent Number 6,695,982 is withdrawn due to applicant's argument.

Claim Rejections - 35 USC § 102

6. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

7. Claims 1-21 are rejected under 35 U.S.C. 102(e) as being anticipated by Le Mercier et al., U.S. Patent Number 6,773,629.

Le Mercier discloses an alkaline earth metal thiogallate phosphor on a dopant. The Le Mercier reference discloses a mixture with the AB_2S_4 phase and B_2S_3 phase wherein A is an alkaline

Art Unit: 1774

earth metal such as Ca or Sr, B is gallium and the dopant may be divalent europium (see column 1, line 26-column 2, line 21). The Le Mercier reference also discloses that the mixture can be used as a phosphor in a phosphor converted light emitting diode in which the excitation may be between 350 nm and 470 nm (see column 6, lines 6-14). Also, the Le Mercier reference discloses that the mixture is formed in an H₂S atmosphere at a temperature between 600-1000 deg C (see column 5, lines 15-36). The phosphor is produced from the mixture A, B and activator where the ratio of B/(A+activator) is 2.06-2.25 (see column 2, lines 33-39). The amount of the B₂S₃ phase is 0.06-0.25. The phosphor can be written as CaGa₂S₄:yEu⁺²:0.06-0.25 Ga₂S₃ where y is at most 0.1. The reference reads on the instant claims when x is 1 in the instant claims.

Response to Arguments

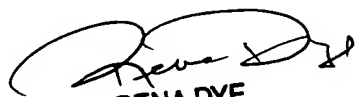

8. Applicant's arguments with respect to claims 1-21 have been considered but are moot in view of the new ground(s) of rejection.
